

# SwabTek Amphetamine Test Kit

ZNTK-AMP-25-00

<b>ITEM #</b>	ZNTK-AMP-25-00
<b>DESCRIPTION</b>	<p>SwabTek’s Amphetamine Test Kit is designed to test for the presumptive presence of amphetamines in any sample. Since the kit uses a treated cotton swab, it can be used to test for amphetamine residue on any surface without the presence of a visible powder or crystal. This allows the user to test any surface that is suspected to have come in contact with the drug, including pipes, pill capsules, baggies and hands. The test is simple and intuitive — and contains no acids, carcinogens or toxic liquids — eliminating any potential risk to the user during testing. Samples may appear as various colored pills and powders and in samples impregnated into paper sheets, liquids and vaping juices.</p> <p>Screens for amphetamine compounds and products, including:</p> <ul style="list-style-type: none"> <li>• Amphetamine (Speed)</li> <li>• Methylamphetamine (Ice)</li> <li>• Methylenedioxyamphetamine (MDMA or Ecstasy)</li> <li>• LSD (Acid)</li> <li>• Synthetic Cannabinoids (Spice)</li> <li>• Synthetic Cathinones (Bath Salts, Mephedrone, Methylone, Naphyrone)</li> <li>• Ketamine</li> <li>• Kratom</li> </ul>
